

Abstract

This invention relates to computerized methods and systems for evaluating employee benefit plans. In one embodiment, a computerized method for determining improvement actions for an employee benefit plan includes uniquely associating an improvement action for one or more attributes of an employee benefit plan; receiving the status of one or more of the attributes for a first employee benefit plan; identifying the attributes of the first employee benefit plan which have a different status than a set of other employee benefit plans, and providing an action plan to improve the first employee benefit plan, the action plan comprising one or more actions associated with the identified attributes.
